HYPOTHERMIA PROTECTION

In just 20 minutes, cold water can deprive you of all mental and physical capacities, leading to hypothermia, unconsciousness and even death. Our team of engineers have done extensive research to understand cold-water survival. How long a person can survive in cold water primarily depends on the water’s temperature, exposure time, and the thermal insulation of the victim’s protective clothing.

What is a “Clo” & What Does it Mean?

“Clo” is a measurement of the thermal comfort of a suit or device. One Clo represents the thermal comfort of an average person in business clothing in a room temperature indoor environment. Fractions of this thermal comfort are what are perceived when worn in the water. Each of the values are below 1.0 because water transfers heat out of the body 25 times faster than air.

Wearing a Mustang Survival suit will increase cold water survival time exponentially.

PROTECTION	CLO VALUE
NUDE	0.060
CLOTHED	0.100
MC5444 with MP4240 (p. 25)	0.170
MSD624 (p. 32)	0.660
IC9002 02 (p. 32)	0.960

SURVIVAL TIMES

This graph indicates random samples of Clo values and the corresponding estimation of survival time in calm water (assuming a thin person with a 5.5°F [3°C] drop in core temperature).

GETTING SEEN IN A RESCUE – WHAT COLOR IS BEST?

Prior to a recent study conducted by Mustang Survival, there was no research on the science of non-reflective conspicuity and the effects of color on conspicuity conducted in marine environments. The most recent Canadian standards prescribe Pantone colors (Orange, Red, and Yellow) for Personal Flotation Devices (PFDs) and Immersion Suits. Notably missing was high visibility American National Standards Institute (ANSI) approved colors which have been mandated on construction sites and within the Public Safety Community throughout North America.

THE FINDINGS

- Research findings show fluorescent yellow-green (G) followed by fluorescent orange (O) were the most conspicuous colors for a floating target. This result was found from simulated laboratory viewings and actual on-water experiments using human subjects.
- When viewing the colors against a simulated maritime horizon using their central vision, the test subjects judged fluorescent yellow-green and fluorescent orange, to be the more conspicuous colors compared to red, orange and yellow.
- On water testing of the four specific fabric colors showed that for both approaching and leaving a target in low or high intensity light, fluorescent yellow-green was the most conspicuous color overall, followed by fluorescent orange.

Since these findings, Mustang Survival has chosen ANSI approved fluorescent yellow-green as the standard color for use in products where visibility is a consideration.

MOBILITY BASED SIZING™

Exclusive innovative dry suit design that reduces bulk while increasing fit, comfort & mobility

The Mobility Based Sizing™ platform is like none other currently in the industry. To order a suit that fits you best, please follow the instructions below:

STEP 1

For accurate measurements, please refer to the measurement diagram and instructions provided. All measurements should be taken with a "tailors" (flexible) tape while wearing garments and armour usually worn under the dry suit.

DESCRIPTION		PROCEDURE
1	Chest	Measure the horizontal circumference around the chest at maximum girth. For males, this is typically where the tape runs under the armpits at the scye. For females, this is at the bustline.
2	Waist	Measure the horizontal circumference around the waist (belt) line.
3	Hips	Measure the horizontal circumference around the hips and buttock at maximum girth.
4	Sleeve	With your arms horizontal, bent at the elbows, and with your fists touching knuckle-to-knuckle out from the chest, measure the distance from the center of the back along the outside of the arm to the outer tip of the wrist.
5	Inseam	Measure the vertical distance from the crotch to the floor. Use a book pressed firmly up between the legs and measure from the top of the book.
6	Torso Hoop	With your shoulders relaxed and the tape running over the center of one shoulder and between the legs, measure the vertical trunk circumference.
7	Height	Vertical standing height with good posture and no footwear.

STEP 2

Based on your measurements, determine your size according to the chart below. If all your measurements fall between the ranges of two sequential sizes (such as between S and M) select the size that best fits your Torso Hoop and Inseam.

DESCRIPTION	XS	S	M	L1	L2	XL	XXL	3XL
Chest	35-38"	37-40"	39-42"	41-44"	43-46"	45-48"	49-52"	53-56"
Waist	29-32"	31-34"	34-37"	35-38"	37-40"	41-44"	46-49"	51-54"
Hips	37-40"	38-41"	39-42"	40-43"	41-44"	43-46"	47-50"	53-56"
Sleeve	29-31"	31-33"	33-35"	34-36"	35-37"	36-38"	37-39"	38-40"
Inseam	28-30"	30-32"	32-34"	33-35"	34-36"	34-36"	34-36"	34-36"
Torso Hoop	59-62"	62-65"	65-68"	67-70"	69-72"	71-74"	76-79"	78-81"

STEP 3

Based on your height, determine your suit length according to the chart below.

HEIGHT	XS	S	M	L1	L2	XL	XXL	3XL
Short	57-60"	61-64"	65-68"	66-69"	68-71"	70-73"	72-75"	72-75"
Regular	60-63"	64-67"	68-71"	69-72"	71-74"	73-76"	75-78"	75-78"
Long	63-66"	67-70"	71-74"	72-75"	74-77"	76-79"	78-81"	78-81"

Following Steps 1 - 3 should bring you to one comprehensive size such as L1 Short or Medium Regular, which is a combination of your overall measurements (chest, waist, etc.) and your height.

PLEASE NOTE: If all your measurement DO NOT fall into the range of two sequential sizes, for example, chest measurement is Medium but Waist measurement is in L2, you may require a full customized suit. Please contact your Mustang Survival Representative for more information.

TRACTION CONDUCTIVE GLOVE NEW

 Gray/Red  Gray/Fluorescent Yellow Green	MODEL NUMBER	MA6003
	SIZES	S-XL
	FEATURES	<ul style="list-style-type: none">AX G Series Suede™ for 30-50% grip improvement in torque testingSilicon grip gives 30-50% grip improvement in torque testingIndex finger and thumb touch screen compatibilityFull finger design for added warmth and protection

TESTING OUR NEW GLOVES

Making a glove that not only protects your hand and fingers but also helps you perform better was no easy challenge. Fortunately testing the glove was a bit easier and the results were clear.

DEXTERITY TEST

The 9-hole peg board test was used to measure the thumb and first finger’s fine dexterity. The time to place all pegs in their holes and then remove them was measured. The test subjects did the test without and then with the right glove. With the fingerless glove, all subjects had better dexterity than without the glove (12% faster with glove).

GRIP TEST

Standard grip tests for gloves exist but we wanted to take that one step further and test torque as it applies to use with a fishing rod. The R&D team at Mustang Survival developed a system to do just that and with each glove, they saw a 30-50% grip improvement with the glove on over the bare hand test.

INFLATABLE RESCUE STICK™

	FEATURES	<ul style="list-style-type: none">• SOLAS grade reflective tape• Polypropylene rope with UV stabilizer

90 FT. RING BUOY LINE WITH BAG

	MODEL NUMBER	MRD190 (USA only)
	SIZES	N/A
	FEATURES	<ul style="list-style-type: none">• Length: 90' (27.4 m)• Material: 3/8" (9.5 mm) Polypropylene Floating Rope• Break Strength: 1900 LBS (862 kg)

MUSTANG SURVIVAL EXCLUSIVE TECHNOLOGIES

3D Chassis	Exclusive to the Elite™ Inflatable PFD. Creates a slim profile to enhance mobility, fit securely and reduce neck fatigue. Wind-tunnel tested to improve the body’s aerodynamics, reduce drag at speed and limit wind interference. Includes a breathable mesh back panel.
Closed Comfort System™	Adjustable neck seal that can be worn loose when out of the water and tightened for immersion. Designed to optimize comfort in constant wear situations.
Comfort Collar™	Made of exclusive Mustang Survival materials to improve comfort around the neck, reduce chafing and encourage all-day wear.
Comfort Cuff™	Made of exclusive Mustang Survival materials to improve comfort around the wrists, reduce chafing and encourage all-day wear.
Hydrostatic Inflator Technology (HIT™)	Water-pressure activated inflation. The inflator will automatically inflate under water pressure and not inadvertently in rain, spray or humidity. Inflates when submerged in 4 or more inches of water.
M-Tech™ Comfort System™	A 3-layer, waterproof, breathable, wearable flotation system that keeps you dry, floats you when you need it and is so comfortable you’ll want to wear it even when you’re not on the water. The first layer is a waterproof, breathable outer shell, the second layer is segmented foam that flexes and moves with you and allows moisture to transfer away from the body and the third layer is a wicking liner that aids breathability. Included in the Catalyst Flotation Coats and Jackets.
Membrane Inflatable Technology™ (M.I.T.)	An ultra-lightweight inflation cell fabric that reduces product weight to create a lighter and more flexible fit.
Mobility Based Sizing™	A sizing and fitting platform exclusive to the Sentinel™ Series Dry Suits. Based on more than two years of extensive anthropometric research, range of motion testing and user evaluations, Mobility Based Sizing™ offers users a semi-custom suit that reduces bulk and increases range of motion without the expensive custom price tags or long lead times. Applies to all Mustang Survival dry suits beginning with MSD6--.
Rapid Repair Technology™	Enables users to self-replace neck and wrist seals in an hour or less, and repair minor leaks in the dry suit shell.
Securezip™	A self-healing zipper originally designed for military aviators. Creates a lighter weight, lower profile and more secure fit. Breaks out effortlessly upon inflation and heals itself upon repacking.
Tug-Tite™	Adjusters designed to be easy to use with cold or gloved hands to improve fit and reduce water flushing.
