

MUSTANG SURVIVAL / NEXT GENERATION INFLATABLE LPU FOR SPECIAL OPERATIONS

MD1500 / MD1501 / MD1502

Following five years of extensive collaborative research and development, Mustang Survival's newest inflatable is the smallest self-righting inflatable LPU for maritime special operations on the market. Using advanced inflator technology developed by Hammar®, our exclusive new programmable automatic inflator offers ultimate control: the user can switch between inflation settings triggered by depth, time submerged in water, or a combination of both. The LPU will also be available in our standard HIT™ inflator, and new manual inflation system.

- Weighing 1 lb., it is the smallest self-righting inflatable LPU for maritime special operations, providing 40 lbs of buoyancy.
- Inflation chamber has a new ultralight membrane film.
- Almost invisible low-profile design allows full field of vision and head mobility without interfering with equipment.
- Easily connects to almost any armor carrier.
- The exclusive Programmable Automatic Inflator is triggered by water depth, time submerged in water, or a combination of both.
- Harness accessory allows device to be used as a stand-alone life vest with no armor carrier.
- SOLAS retro reflective tape attached to the bladder via hook and loop so that it can be removed or switched to GLINT tape by the user.
